PROFILE

Full-Stack Developer skilled in the MERN stack (React, Node.js, Express, MongoDB), with hands-on experience designing scalable REST APIs, MongoDB schemas, and backend systems where correctness matters, including idempotent job processing and transaction-safe financial logic. Comfortable working end to end, from database and system design through deployment on Vercel, Render, and AWS. Looking for a Software Engineer / Graduate Engineer Trainee role.

EXPERIENCE

Full Stack Developer Intern | EduTantr

Dec 2025 – Mar 2026 | Remote

- Built the core interview workflow for a full-stack AI Interview Preparation platform, including a separate NLP microservice in FastAPI that scores responses using TF-IDF and cosine similarity for near real-time feedback.
- Added JWT authentication with httpOnly cookies to cut down XSS exposure, then layered in role-based access control to lock down private routes on both frontend and backend.
- Built the REST API layer connecting frontend, backend, and the NLP microservice, following MVC structure with input validation and centralized error handling.
- Spent a good part of the internship debugging across all three services, working through real REST API, auth, and CRUD problems rather than isolated exercises.

PROJECTS

StakeFlow: Full-Stack Investment & Referral Platform | Personal Project | [GitHub](#) | [Live Demo](#) 2026

- Built StakeFlow end to end, a full-stack investment and referral platform with 9 REST API endpoints covering auth, investments, dashboard, and referrals. React, Node.js, Express, MongoDB, deployed on Vercel and Render with MongoDB Atlas.
- Made the daily ROI payout job safe to run twice by accident, using a unique compound MongoDB index and transactions instead of relying on application-level checks alone.
- Referral income flows up to 5 levels through a user's referral chain. Replaced a per-level query pattern with a single query and in-memory tree traversal.
- Optimized dashboard performance with MongoDB aggregation pipelines and parallelized independent queries using Promise.all instead of running them sequentially.

Streamify: Real-Time Chat & Video Calling Platform | Personal Project | [GitHub](#) | [Live Demo](#) 2025

- Built a real-time chat and video calling app with React.js, Node.js, Express, MongoDB, and Stream SDK, deployed on Render.
- Added JWT-authenticated REST APIs for users, messaging, and call sessions.
- Used TanStack Query to manage async state, cutting down redundant requests and keeping seen receipts and typing indicators updated in real time.
- Added media sharing and call recording, handling multiple concurrent users.

SKILLS

Frontend: React.js, Next.js, TypeScript, Redux Toolkit, Context API, JavaScript (ES6+), HTML5, CSS3, SASS/SCSS, Material-UI

Backend: Node.js, Express.js, Python (FastAPI), RESTful API Design, JWT Authentication, Java, EJS

Databases: MongoDB, Mongoose, MySQL (schema design, indexing, aggregation pipelines)

DevOps & Tools: Git, GitHub/GitLab, AWS, Vercel, Render, MongoDB Atlas, CI/CD (Git-integrated deployment pipelines), Postman, Webpack, Babel

Fundamentals: Data Structures & Algorithms, Time & Space Complexity, DBMS (Normalization, Indexing), Networking, OOP

CERTIFICATIONS & ACHIEVEMENTS

- Ethical Hacking, Certificate of Training, Internshala
- Solved 50+ problems on LeetCode across arrays, strings, and hash maps
- Participant, Inter-Institute Coding Competition, Seacom Engineering College (2024)

EDUCATION

Master of Computer Applications (MCA)

July 2024 – July 2026

Seacom Engineering College, Howrah, West Bengal | CGPA: 7.32

Bachelor of Computer Applications (BCA)

July 2020 – Aug 2023

George College, Kolkata, West Bengal | CGPA: 8.74
